

Tailor Made Consulting For You

G.S. Jones consulting provides services that most claim managers and adjusters are not aware of. Along with the ability to estimate damages to businesses and homes, G.S. Jones consulting also provides many value added benefits. John DiMenno G.S. Jones consultant states “The most surprising thing I hear on a regular basis from adjusters is ‘I didn’t know you guys were so knowledgeable on this type of claim’ ”. Services range from distinguishing cracks through out a house as either pre existing, or caused by an insured loss, to providing experts to determine if complex commercial refrigeration equipment and controls are damaged as a result of fire. “The network of building experts we have developed over the years are proficient in their field and knowledgeable on insurance procedures and claims processes. This is unparalleled in our competitive market. In addition all expert analysis is incorporated into one easy and understandable report from G. S. Jones.” States Dan Jones Senior Building Consultant. That way the answer on any aspect of a claim is just a phone call away for the adjusters. G.S. Jones Consultants understand

Workers position equipment to move modular classrooms

3 of 5 modular classrooms are set in place

“God Has Watered Our School To Help It Grow”

The following are excerpts from St. Ursula School - Hampton Township, winter newsletter.

G.S. Jones was asked to provide modular classrooms for grades K-8 at St. Ursula School as a result of a December 22 water leak in the school’s first floor restroom.

Although this is not an unusual request for a restoration company, it is typically a project planned 2 to 3 months before the end of a school year, and is completed during summer break, prior to the return of classes. Due to our unique situation, G.S. Jones was asked to plan and complete this project in 24 days.

Scott Jones, Vice President of G.S. Jones responded, “We’ll make it happen”, during a meeting with Diocesan officials and representatives of St. Ursula School. A fast, quality driven job is often asked of G.S. Jones’ Emsworth based fire and water damage restoration business. Their clients are always faced with urgent situations when disaster strikes.

“There were many challenges with

this particular project; coordinating close to 100 workers with everything from parking to production and final move in was a challenge to say the least”, according to Jeremy Martincic, Project Manager G.S. Jones, “let alone assuring the quality of work and safety of everyone - especially the children of St. Ursula School.”

Every one involved in the project was willing to “Make it happen”. The direction from the Diocese Office of Property Planning and Development office, set the tone from the start of what was to be accomplished and gave 100% of their time and expertise to the project. Parishioners and all the staff at St. Ursula provided clear direction of what they required of the project in order to be as beneficial as possible for the students. Hampton Township Police provided escorts for the modular class rooms from route 8 to the staging area. The Hampton Township Fire Marshall was able and willing to provide clear

...School

communication to Matt Poole, G.S. Jones Project Estimator, and Jeremy Martincic, as to what requirements were needed such as fire protection, emergency lighting, and ADA accessibility.

Other Hampton Officials, coordinated the details and requirements concerning water supply and land usage.

G.S. Jones personnel worked many long (12 hour) days in severe temperatures and weather. They worked well into weekends and evenings (on one particular night until 3:00 am) to achieve the goal.

There were many bumps in the road along the way. Whenever one would surface, an alternative solution would be developed and put into action. The key to the success was clear communications and willingness of EVERYONE to pull together to do what was best for the kids, and to "make it happen".

that keeping the claims handling expenses down on a loss is near the top of the list for adjusters.

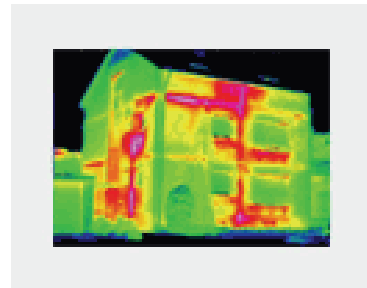

That is why we don't waste insurance company money. "If we inspect a site and find the item in question is a legitimate part of the claim we won't waste time and money on a report to say so. Also with the tiered fee structure of our four consultants, we make sure the appropriate consultant is looking at the claim. This common sense approach has been a cornerstone of how we handle all claims and has helped to build the reputation we have today.

"Clerk Of The Works"

G.S. Jones consulting is rolling out its newest service; Clerk Of The Works. We can monitor restoration projects that other contractors are working on. Such as documenting labor hours, material and equipment utilized. (If it's a time and material project.) G.S. Jones can provide on site personnel to administer and set up procedures for another contractor to follow. We can also photograph and document unforeseen conditions and discuss overall job scope

with the other contractor. Real time decisions can be made by the adjuster with the use of digital photography and the opinion of a trusted consultant on the site.

"We Handle The Small, Local Claims Too" Mr. Aspergillus noticed mold in his attic? – Improper ventilation, or water infiltration around a chimney? Mrs. Musty says she has water in the basement? – Ground water, or sump pump failure? Mr. Picky noticed small black dots on his siding? – Overspray from a neighbors paint job, or nature's Artillery Fungus? Whatever the claim might be G.S. Jones consultants will be happy to evaluate and provide reporting to help the adjuster get the claim off their desk. Fee costs and parameters can always be discussed prior to sending us the claim. *Call Dan Jones @ 412 766 6886 to discuss fee structure and services for consulting.*
